

Is there a relationship between an
MLB team's payroll and the amount
of games they win?

Bailey Michalak

MLB Wins per Payroll

- Positive relationship between payroll and wins
- Teams with highest payroll were comfortably in playoff and World Series contention
- With few exceptions, teams spending less than \$150 million couldn't pass 90 wins
- p-value is 0.005
- Not confident enough to say that spending more definitely leads to winning more games
