

Does the Pit Stop time affect the Final Race position in F1?

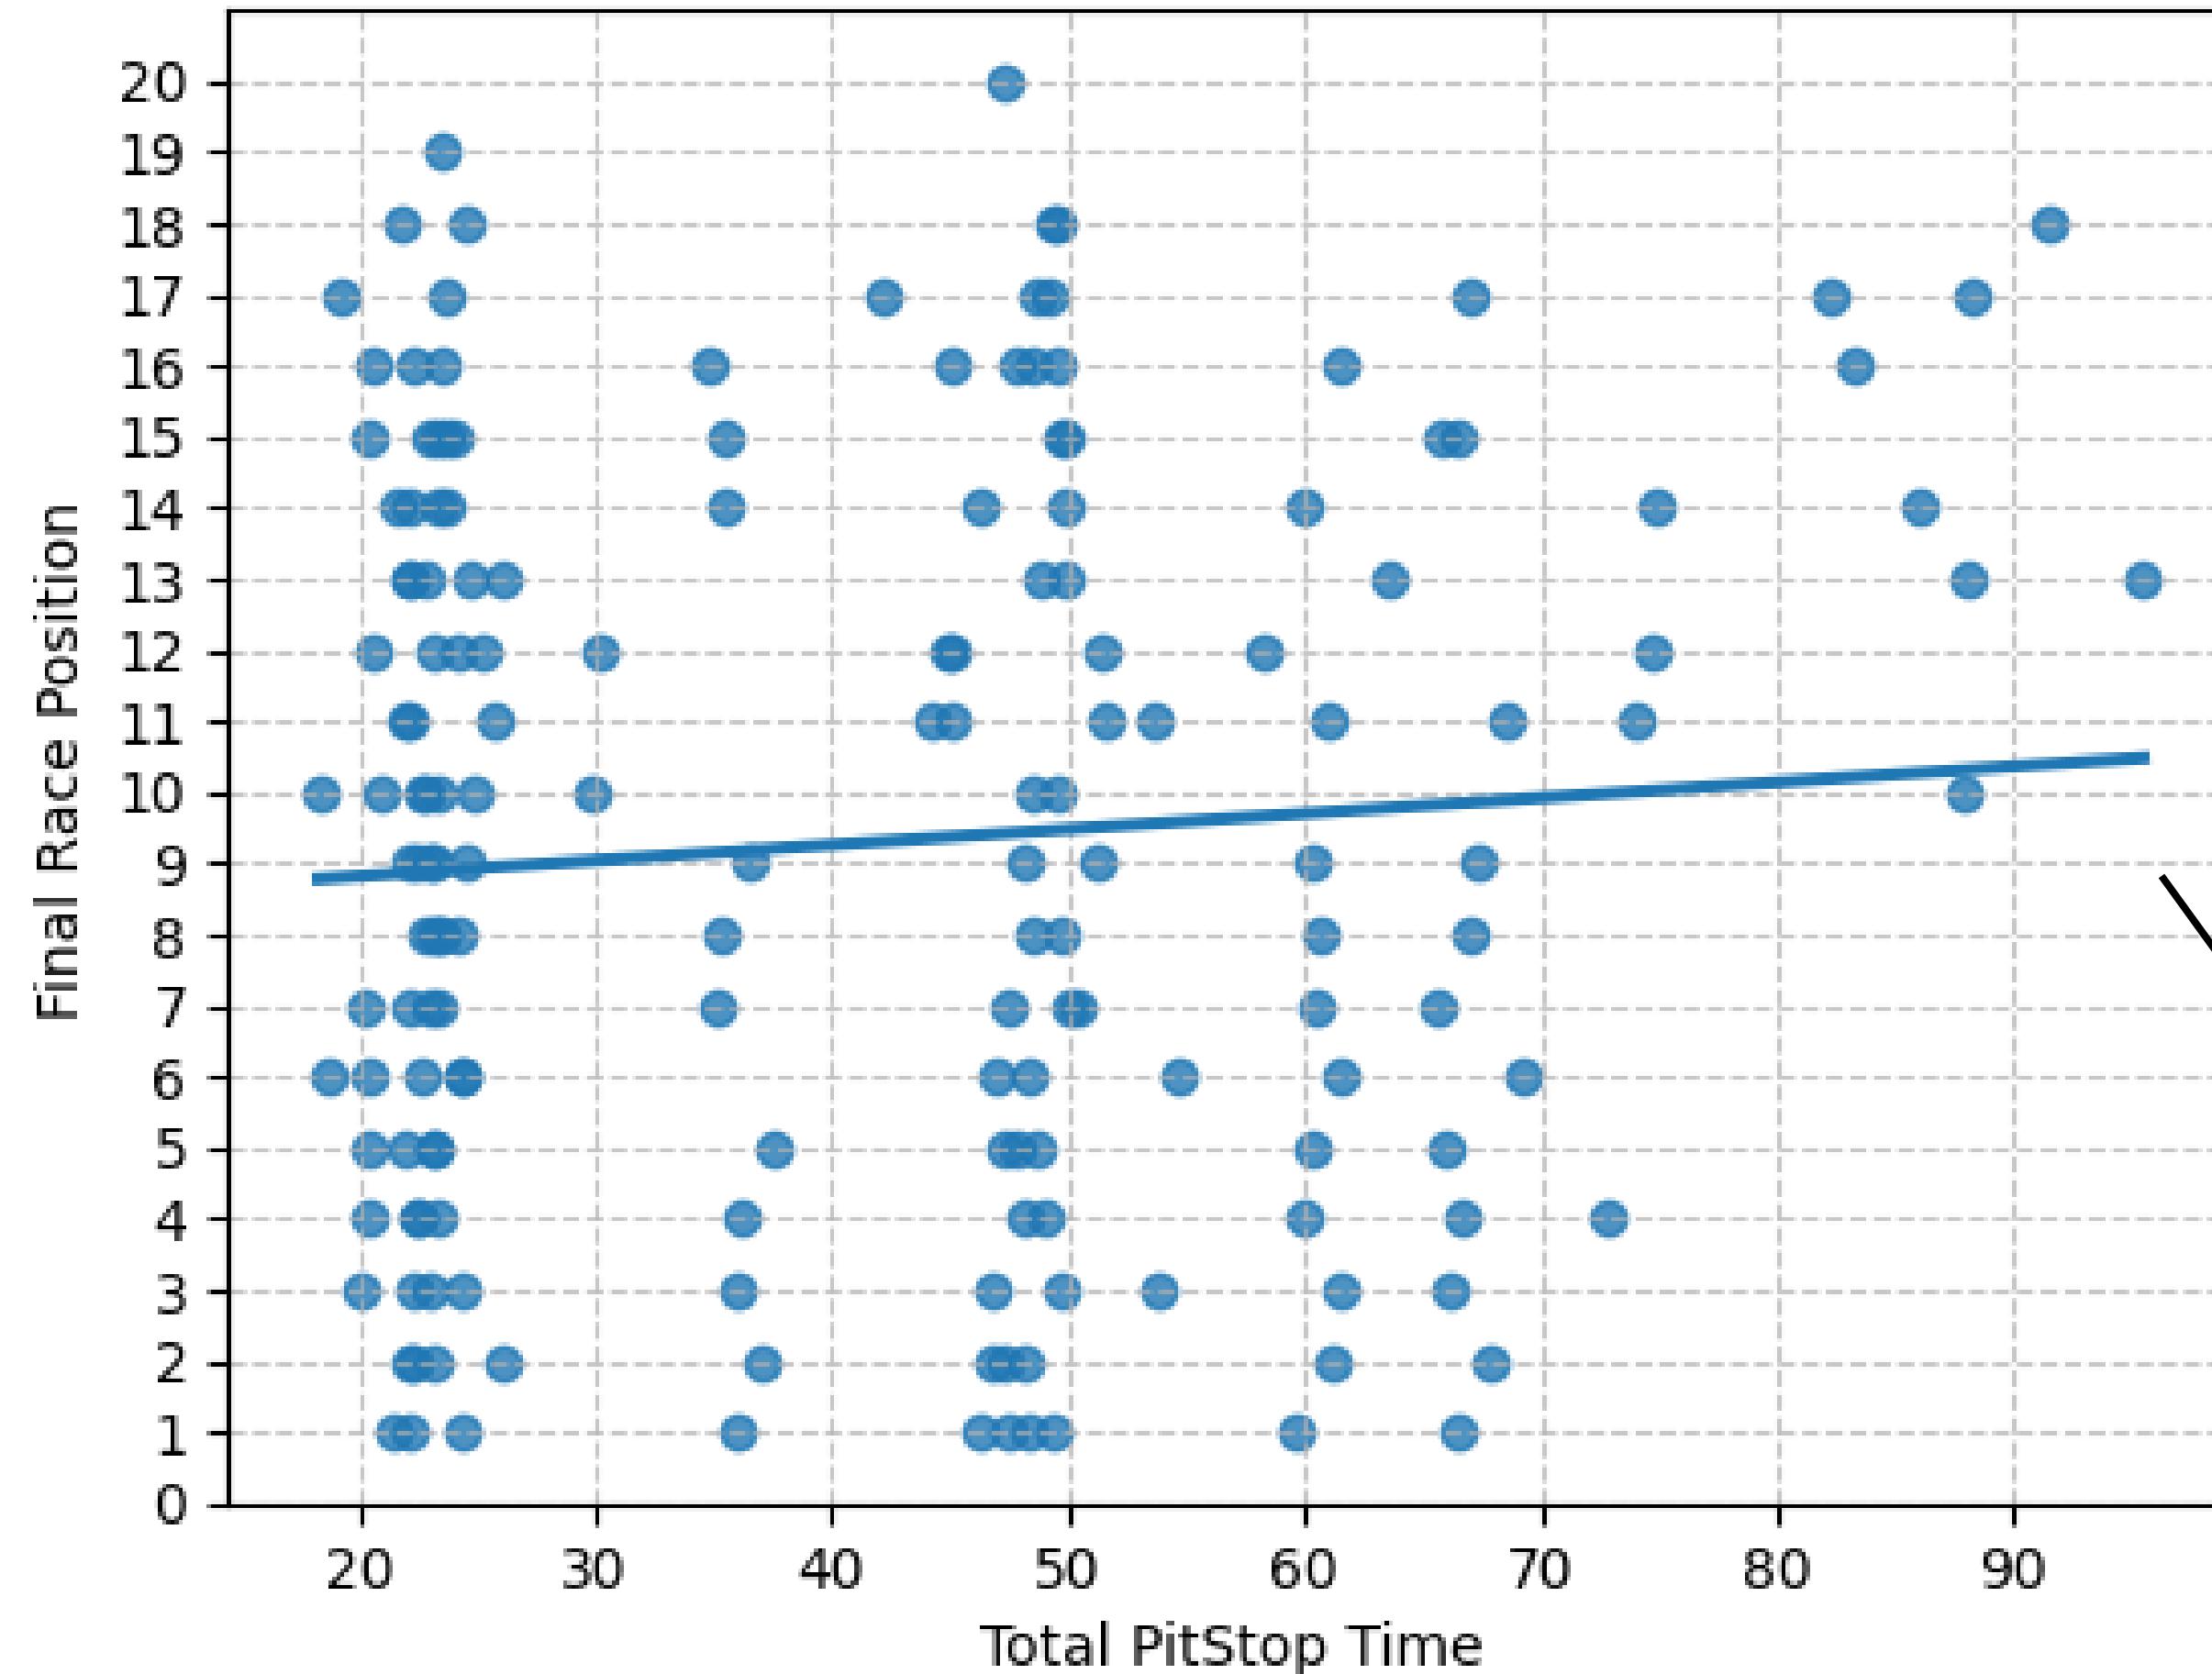

Saavi
Sakhuja

Relationship between pitstop time and final position

Relationship between pitstop time and final position

Each additional second in the pit lane worsens finishing position by about 0.02 (1/50) places.

However, the result is not statistically significant since:

$P \text{ value} = 0.275 > 0.05$

$\text{Slope} = 0.0221$
or 1/50
